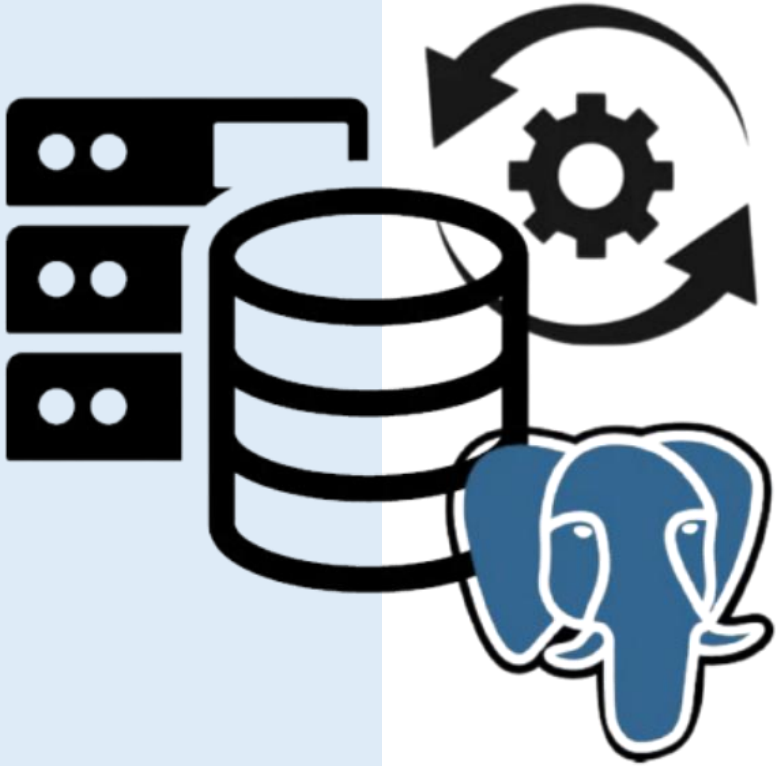
Quarterly Database Backup Restoration Activity



SPVDataFlow

Date : 17/04/2026

The quarterly database restoration test has been successfully completed as per plan

This test ensures that the backup and recovery process is functioning correctly and can be used in case of a disaster or data loss.

Environment Details

Database	PostgreSQL 17
Tool Used	pgAdmin 4
Backup Type	Full Backup
Backup File	tatapower_FULL_20260410_100458.bac
Backup Location	F:\Restore_17thApril
Restored Database Name	spvdataflow_restoreddb_17_4_26
Test Environment	10.10.12.73 PostgreSQL Server

Backup file Details

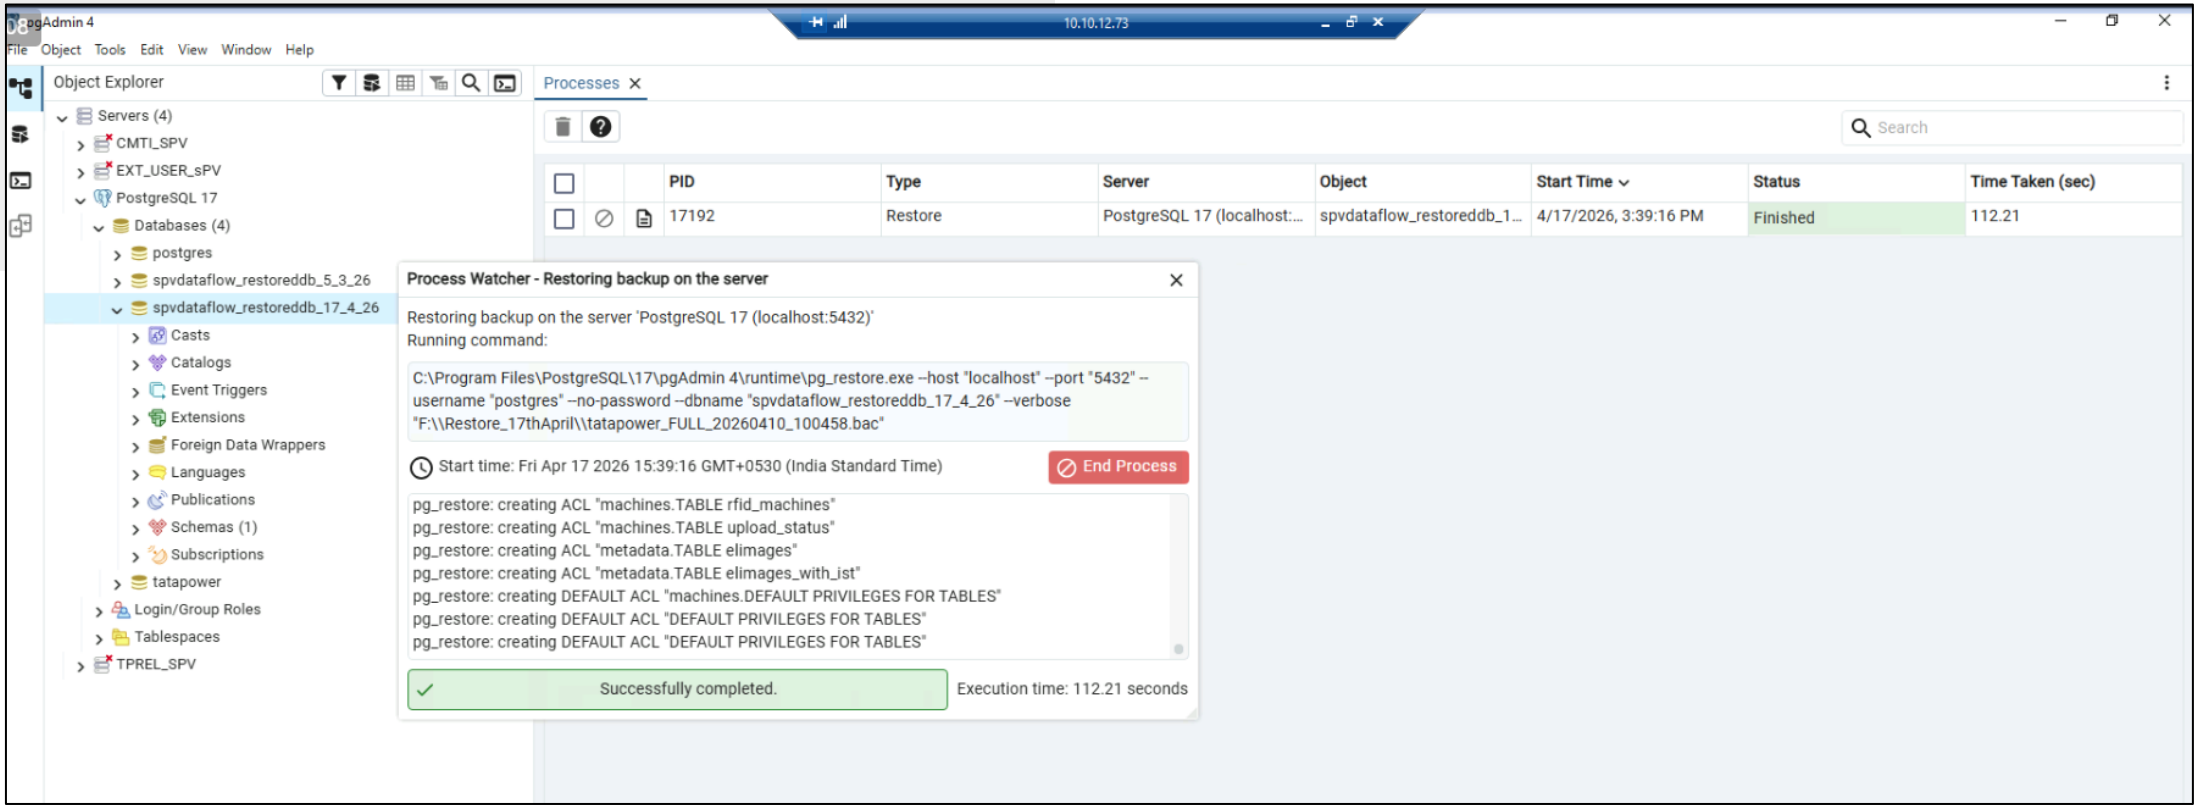
Backup File Name	Date	Size
tatapower_FULL_20260410_100458.bac	04 April 2026	~176 MB

Restoration Activity Summary

Step	Activity Performed	Status
1	Verified the availability and integrity of the PostgreSQL backup file prior to restoration	✓ Passed
2	Successfully restored the database using the pgAdmin Restore Utility from the available backup file	✓ Passed
3	Validated the restored database objects including schemas, tables, and associated structures	✓ Passed
4	Performed data validation by executing sample queries on key tables to confirm data consistency	✓ Passed
5	Verified the restored database size and confirmed completeness of the restoration process	✓ Passed

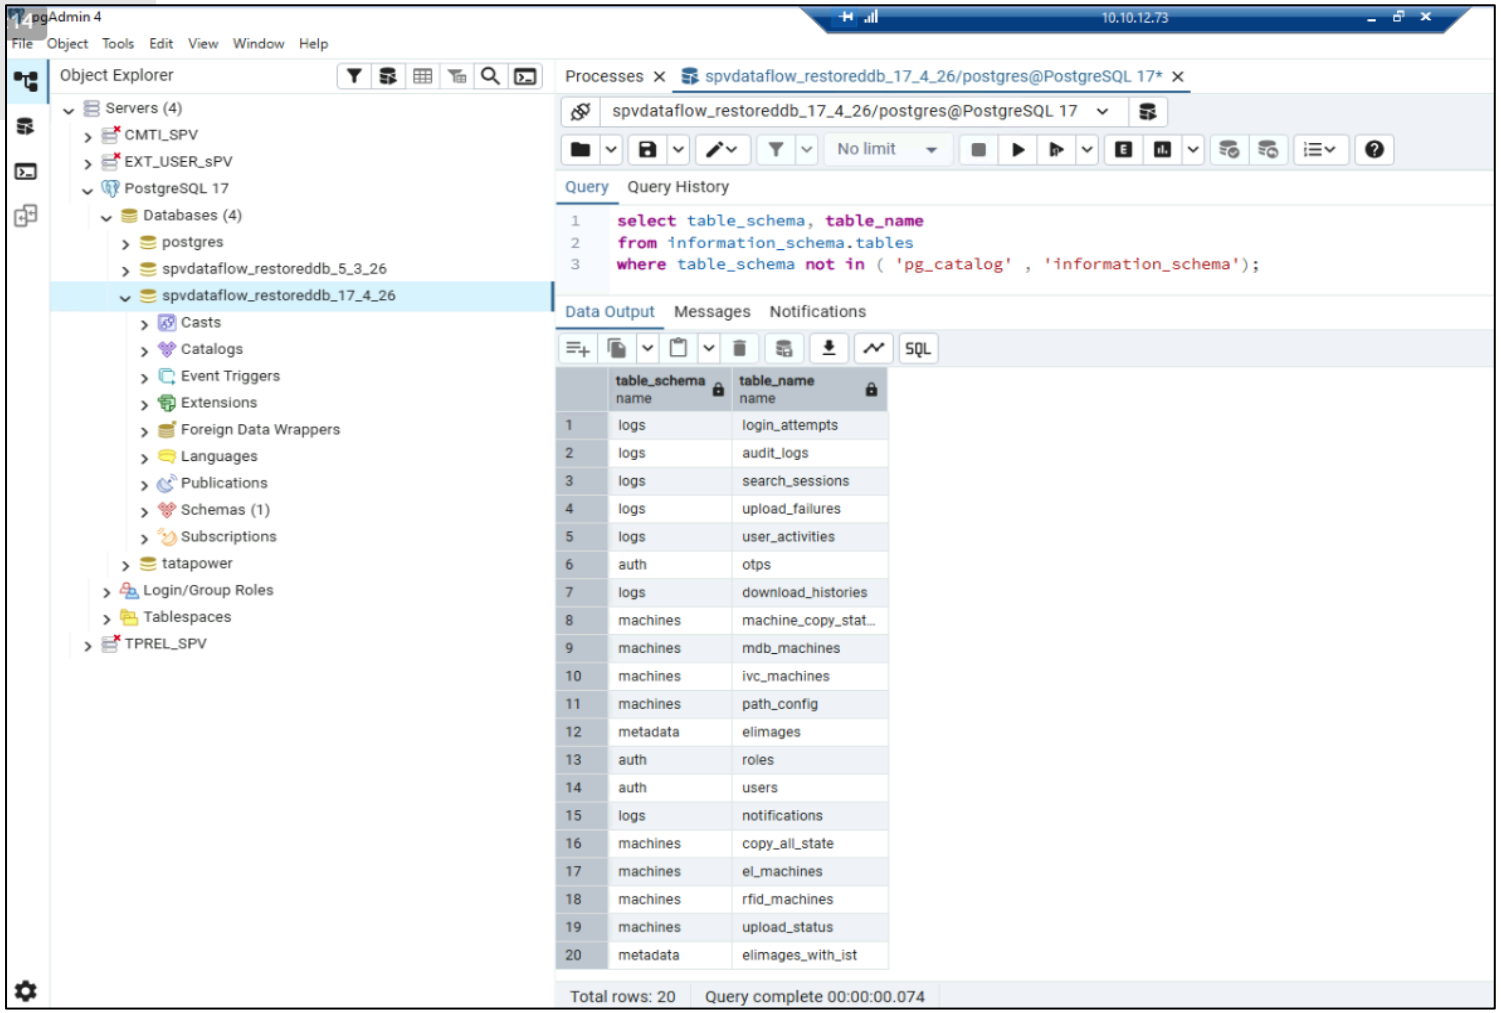
Successful Backup Restoration

- The database restoration process was executed using the pgAdmin Restore Utility, and the process completed successfully without any errors.
- The backup file was confirmed to be accessible and intact



Database Schema and Table Verification

Post-restoration validation was performed to confirm that all database schemas and tables were successfully recreated in the restored database.



Sample Data Validation

Sample queries were executed on key tables to verify that the restored database contains valid data and that the data is accessible for querying.

Query | Query History

```
1  select count(*) from logs.user_activities;
```

Data Output | Messages | Notifications

	count bigint
1	340

Query | Query History

```
1  select count(*) from auth.users;
```

Data Output | Messages | Notifications

	count bigint
1	17

Restored Database Size Verification

The restored database size was verified to confirm that the database contents were fully restored and consistent with the expected data volume.

Query | Query History

```
1  select pg_size_pretty(pg_database_size('spvdataflow_restoreddb_17_4_26'));
```

Data Output | Messages | Notifications

	pg_size_pretty text
1	2243 MB

Conclusion

Test Date and Time	April 17, 2026
Database Name	Spvdataflow_restoreddb_5_3_26
Backup Type	Full PostgreSQL Backup
Backup File	tatapower_FULL_20260410_100458.bac
Restoration Tool	pgAdmin 4 Restore Utility
Restoration Time	~10-15 minutes
Backup Validation Result	Backup file verified and accessible without corruption
Schema Verification Result	All expected schemas and tables successfully restored
Data Validation Result	Sample queries executed successfully with valid results
Database Size Validation	Restored database size verified (2243 MB)
Application Connectivity	Database accessible and queries executed successfully
Overall Result	Restoration completed successfully without errors
Tester Name	Amruth Srinivas M G, P V Mohana Priya
